

Output:

Output:

src/main/java/com/example/demo/controller/CountryController.java

src/main/java/com/example/demo/model/Country.java

The screenshot displays an IDE interface with the following components:

- Project View:** Shows the project structure with the file `Country.java` selected under `src/main/java/com/example/demo/model`.
- Code Editor:** Contains the source code for `Country.java`. The code defines a `Country` class with two private attributes, `code` and `name`, and two public methods, `getCode()` and `getName()`.
- Run View:** Displays the execution logs for `DemoApplication`. The logs show the application starting successfully, with messages indicating the initialization of the Spring DispatcherServlet and the Servlet.

```
package com.example.demo.model;

public class Country {
    private String code;
    private String name;

    public Country(String code, String name) {
        this.code = code;
        this.name = name;
    }

    public String getCode() { return code; }
    public String getName() { return name; }
```

```
