

Output:

External Api Interface

Class

Test Class

The screenshot displays an IDE interface with the following components:

- Project View:** Shows the project structure for 'Exercise1_MockingAndStubbing'. The 'test' directory is expanded, showing the 'MyServiceTest' class.
- Code Editor:** Displays the source code of 'MyServiceTest.java'. The code imports necessary classes and defines a test method 'testExternalApi()' that uses Mockito to mock 'ExternalApi' and verify the behavior of 'MyService'.
- Run View:** Shows the execution results of the test. The test 'testExternalApi()' passed successfully in 959 ms.
- Output Console:** Displays the output of the test, including the path to the Java executable and the result 'Mock Data'.

```
1 import org.example.ExternalApi;
2 import org.example.MyService;
3 import org.junit.jupiter.api.Test;
4
5 import static org.junit.jupiter.api.Assertions.assertEquals;
6 import static org.mockito.Mockito.*;
7
8 public class MyServiceTest {
9
10     @Test
11     public void testExternalApi() {
12         ExternalApi mockApi = mock(ExternalApi.class); // Create Mock
13         when(mockApi.getData()).thenReturn("Mock Data"); // Stub Method
14         MyService service = new MyService(mockApi); // Inject Mock
15         String result = service.fetchData(); // Call Method
16         System.out.println("Result: " + result);
17         assertEquals("Mock Data", result);
18     }
19 }
```

Run Results:

Test Name	Duration	Status
MyServiceTest	959 ms	Passed
testExternalApi()	959 ms	Passed

Output:

```
Process finished with exit code 0
```
